Abstract

For every business or business that is run by someone, the brand name that is owned must play an important role in the sustainability of the business. Business people always try to improve the brand name to be more embedded in the minds of the people. They always have their way of communicating and promoting their products to attract more consumers' attention. Scarlett Whitening is a brand engaged in local skincare which was founded by an Indonesian actress named Felicya Angelista. Scarlett Whitening uses Korean public figures as a tool to communicate her products to consumers, and so that their products can also reach the global market. Therefore, this study aims to see whether there is an effect of using a Korean brand ambassador on increasing the brand value of Scarlett Whitening. The theory used in this research is the Stimulus Organism Response (S-O-R) theory which is related to how various forms of communication can stimulate other people to react in a certain way. In this study, there are two types of variables consisting of the brand ambassador variable with a focus on four indicators in it as the independent variable and the brand value variable as the dependent variable. The object of research in this case is the role of the girlband K-Pop Twice. The sampling technique used is a non-probability sampling technique with a purposive sampling approach. The data collection technique used primary data obtained from distributing questionnaires to 105 respondents as samples and secondary data derived from relevant books, journals, and previous research. The data analysis method used is validity test, reliability test, classical assumption test, multiple regression analysis test, and hypothesis testing. The results showed that visibility and credibility indicators had a positive but not significant effect on brand value, while attraction and power indicators had a positive and significant effect on brand value. So the conclusion is that the hypothesis in this study is accepted because brand ambassadors are proven to have a positive influence on brand value.

INTRODUCTION

Along with the development of an increasingly modern era, culture from outside did not escape to enter the country of Indonesia. One example is the culture of Korea, it can be said that Korean culture is growing rapidly lately. It is undeniable that nowadays all things Korean is in great demand by many people. Korean culture that began to enter the country of Indonesia made everyone flocked to continue to follow the current trends from that country.

Whether it's in terms of songs, films (Korean dramas), makeup and skincare, style of dress fashion) food, idols, and speaking styles, all of them can almost be categorized as having flowed into the Indonesian state. This eventually gave birth to a phenomenon called the 'Korean Wave'. ²⁶Originally, the Korean Wave, or Hallyu, is referred as the phenomenon of Korean pop culture, such as $\hat{\mathbb{T}}$ dramas, films, pop music, fashion, and online games being widely embraced and shared among the people of Japan, China, Hong Kong, Taiwan, and other Asian countries." Han&Leein oh et al 2013 : 2)

In 2019, Twitter via Media Outreach Newswire announced a list of countries that tweeted the most about K-Pop artists throughout 2019 and Indonesia was ranked 3rd after Thailand and South Korea. As for viewing K-Pop videos on Youtube by country, Indonesia ranks 2nd with a percentage of 9.9% (Won So, 2020). These data provide evidence that Indonesia is indeed very close and s starting to become thick with Korean culture.

Seeing the above phenomenon, makes various businessmen or business entrepreneurs $\hat{\mathbb{Q}}_{0}$ at this opportunity to be used as an opportunity to implement strategies in marketing their products or businesses. They think that using Korean things in their business during this trend will have an effect on sales. The purpose of doing this of course is to attract more consumers because they are interested in it.

It can also be said that nowadays many businesses are run by someone and the competition between businesses is certainly getting tougher. This competition makes business people think hard to make their brand or brand always ogled by the public. They always think about what creative and innovative concepts can ultimately attract the attention of consumers. One example is by making Korean public figures as brand ambassadors for their brands.

Of course, with the use of a brand ambassador for a brand, the characteristics contained in the brand ambassador must be considered. The characteristics of brand ambassadors according To-Koster and Percy (Royan, 2016:15) consist of visibility, credibility, attraction, and power. By paying attention to these characteristics, it is hoped that the use of brand ambassadors can be successful and work optimally which in the end can help instill the brand in the minds of consumers, generate interest and end up making a purchase.

One of the brands currently using Korean public figures as brand ambassadors is Scarlett Whitening, this is a local brand owned by Indonesian actress, Felicya Angelista. Of the several existing brands, Scarlett is the one that holds this concept with the aim of expanding sales to the ह्यक्तिbal market. Scarlett focuses on producing skin care products to treat dry, dull and dark skin problems

Scarlett was founded in 2017 and is produced by PT. Sinar Alfa Omega, Tangerang, Banten. They produce skin care such as facecare, bodycare, and haircare with various variants as needed. As we know, the skin is the outermost organ of the body that can be a source of confidence in one's appearance. Not only for women, but men nowadays are also starting to entrust their skin care products to make it look healthier and more well-groomed.

It is evident from the enthusiasm of consumers when buying products in e-commerce, one of which s Shopee. If you look at the category that is most in demand and purchased on the platform it is the beauty category. This makes businesses engaged in beauty have added value in the eyes of the community, because they see the importance of self-care at this time. Scarlett as a brand that is included in this category is finally loved by many people.

Even though Felicya Angelista is a fairly well-known public figure in Indonesia and this fame may also influence the sales of her products to increase further, marketing tactics and

strategies are still needed to maximize sales. One of the strategies they do is, as mentioned above, they collaborate with brand ambassadors who come from Korea or what they call star ambassadors to be more different from the mention of brand ambassadors in general.

This certainly surprised Scarlett lovers and the public, from the beginning they succeeded in making a Korean actor named 'Song Joong-Ki' then Scarlett made a Korean girl group named Twice' their star ambassador. Unmitigated, these two star ambassadors are quite well-known public figures in Korea. Felicya Angelista as the owner of this brand really likes the Korean world Southis is what encourages this to happen.

By making 'Twice' as Scarlett's star ambassador, Scarlett hopes that everyone who uses Scarlett products, especially women, can be more confident, show true charm, and become the best version of themselves. Scarlett even issued the latest tagline when collaborating with Twice, namely 'Reveal Your Beauty' to further support this. The collaboration between Scarlett and Twice is planned to last until 2022.

The ans of Twice in Indonesia (also called ONCE) are very large and their enthusiasm is very high for their idol, so it is hoped that this collaboration between Scarlett and Twice can have a good impact on the company and can also provide happiness for fans of the Korean girl group. The good impact in question is in terms of increasing brand value or what is also known gas brand value rather than Scarlett. The notion of brand value itself is "The total value of how much people are willing to pay more, or how often they choose, the hopes, memories, stories and Felationships of one brand over another." (Seth Godin in Forbes.com)

So, if it is concluded, what is the background of this research? With the phenomenon where Scarlett makes the girl group Twice as a star ambassador, the researcher wants to see and examine more deeply whether there is a significant influence on the response of consumers to This, whether Scarlett consumers or even audiences who have never bought Scarlett become Interested in buying., willing to pay more for Scarlett products than usual, or always keep the Scarlett brand in their minds as a treatment for their skin. In this study, researchers will examine more deeply about the research focuses and problems as follows:

1. How big is the effect of Visibility (popularity) and Credibility (credibility) of the k-pop girl group twice as brand ambassadors on increasing the brand value of Scarlett Whitening?

2. How big is the effect of Attraction and Power of k-pop girl group twice as brand ambassadors on increasing the brand value of Scarlett Whitening?

In this study, the basic theory used is the S-O-R model. This theory was first put forward by Houland, et. al in 1953. This theoretical model was born because of the influence of an exchology in communication science. This can happen because psychology and communication psychology in communication science. This can happen because psychology and communication have the same object of study, namely the human soul which includes attitudes, opinions, -behavior cognition, affection and conation. The basic assumption of S-O-R theory is that the cause of behavior change depends on the quality of the stimulus (stimulus) that communicates with the organism.

A change in society cannot be made without the help and encouragement of outsiders, the stimulus or message conveyed to consumers may be accepted or rejected. Communication will take place if there is attention from the communicant. The next process the communicant understands. This communication ability continues the next process. After the communicant processes it and accepts it, there is a willingness to change attitudes (Effendi, 2018: 254-256).

This theory has three main elements, namely message (stimulus, S), reception / audience / communicant (organism / 0), and effect (response / R). In this study, if the three elements are linked and elaborated, then the stimulus (S) can mean communication or marketing activities carried out by Scarlett Whitening by making Twice their brand ambassador. Then for organism

iurnal Komunikasi dan Bisnis Vol. 9 No. 2 November 2021

(0) it can mean Scarlett consumers who have long been loyal customers or new potential customers who are just interested in buying when they find out 'Twice' as a star ambassador. For the response (R) in the form of the expected effect, namely whether there is a buying

Garlband K-Pop)

According to According to Yuanita (2012:3-4) K-Pop or Korean Pop is a type of genre or type of music originating from South Korea, usually this type of genre has the characteristics of cheerful songs with fast tempos and uses Korean lyrics that are also mixed with a little English and accompanied by modern dance. In addition, Korean pop personnel are Koreans, most of whom have beautiful and handsome faces, look fashionable, and always try to show maximum performance. This is what makes many other young people from various countries in Asia participate in imitating the Korean pop style.

🙍 👱 \exists Meanwhile, according to Emilie (2012) K-pop is an abbreviation of Korean Pop (Korean Pop Music, which is a type of popular music originating from South Korea. The talented young generation (such as songwriters, producers) have learned a lot about the global music scene by in finging about change and incorporating elements of their country in their creations. Korean pop is centered on idol groups (usually teenagers) who have greater popularity than solo šingers.

🚊 🛣 🖥 From some of the definitions above, it can be concluded that K-Pop is a term for a group of teenage singers between women or men who sing songs accompanied by modern dances with the pop genre using mostly Korean lyrics in it. Many like K-Pop songs sung by Korean girl groups or boy bands because they sound cool to listen to, which in the end brings and makes the group adolized by many people. For the definition of K-Pop girl group itself, it can be defined as a group of female singers who have beautiful faces and slim bodies while singing cheerful songs to attract the attention of many people.

Brand Ambassador

According to Terence A. Shimp (Nuraini, 2018:27) brand ambassadors are also known as supporters of a brand and act as stars of the brand as a form to support promotional and sales activities. The use of brand ambassadors usually aims to influence the audience so that they are Interested in buying and using products from a brand. The selection of the brand ambassador uses a well-known public figure and has a positive appeal among the public.

Brand ambassadors have their own characteristics or indicators as a reference. The characteristics or indicators used in evaluating the use of brand ambassadors in marketing activities according to Koster and Percy (Royan, 2016:15) which is also known as the VisCAP model, consist of visibility, credibility, attraction and power.

According to D

According to David Aaker (2013: 19), strategy is defined as a shared means with long-term goals to be achieved. Strategy is an action potential that requires top management decisions and a large amount of company resources. So, in short, strategy is an action or activity carried out by a person or company to achieve the goals or objectives that have been set.

For the understanding of marketing according to Kotler and Armstrong in (Science, 2018:4) are: "Marketing is the process by which companies create value for customers and build strong customer relationships to capture value from consumers in return."

Meanwhile, Fandy Tjiptono (2017:228) defines a marketing strategy as follows: "Marketing strategy is a plan that lays out the company's expectations of the impact of various marketing activities or programs on the demand for products or product lines in certain target markets."

Soft can be concluded that the overall understanding of marketing strategy is an activity or action in an effort to promote or market a product, be it goods or services by carrying out dan tinjauan suatu masa

various plans or tactics aimed at achieving things that have been set at the beginning, namely in order to increase the number of sales to be higher and maximum.

Brand Value

According to (Kotler and Keller, 2006:276) the notion of brand value is "Kotler and Keller argue that the value of a brand is directly related to the perception and mind set of prospects and customers. It reflects the direct and indirect brand experience of what they have seen, heard, learned, thought and felt over time."

So that it can be concluded, a brief understanding of brand value or brand value is the So that it can be concluded, a brief understanding of brand value or brand value is the possibility or availability of consumers or audiences in spending more or extra money for a brand or brand. The availability is of course based on the factors that consumers feel about the brand: The success or success of a product to be purchased and finally paid for by consumers is closely related to brand value.

The object of this research is how the role of the K-Pop girl group itself is, whether Twice that an effect on increasing the brand value of the Scarlett Whitening product. Meanwhile, the units that make up the population are all people who have bought products from Scarlett and Felt an interest in buying them when they found out that there was a 'Twice' star ambassador for 🕏 cārlett. 💆

In this study, researchers used quantitative research methods with a descriptive survey In this study, researchers used quantitative research methods with a descriptive survey approach. The research instrument used is several forms of systematically arranged questions statements addressed to a certain group in accordance with the research objectives required and in the end the data is then recorded then processed and analyzed. With this step. gresearchers can obtain facts from the phenomena that arise and also get factual information. When a series of studies have been carried out, starting from data collection, data processing, to data analysis, then conclusions are made and reports are prepared based on the data that has been obtained to see whether there is a proven relationship or influence relationship between 🖫 ariables 🖰

ı da The research variables used in this study consisted of the independent variable Independent Variable) and the dependent variable (Dependent Variable). The independent or independent variable according to Sugiyono (2017:39) is defined as a variable whose existence affects or is the cause of changes or the emergence of the dependent variable, this change can be positive or negative. The independent variable used in this study is the brand ambassador played by the K-Pop girl group Twice. The dependent or dependent variable according to Sugiyono (2017:39) is a variable that is influenced or is the result of an independent variable. The dependent variable used in this study is brand value.

The types of data used in this study are included in the types of primary data and secondary data. The reason it is included in the type of primary data is because in this study, the primary data used is in the form of questionnaires from Scarlett consumers who have long been loyal customers or new consumers who are just interested in buying when they find out 'Twice' as a star ambassador. While the secondary data used comes from books, journals, and articles as support.

The technique used by the researcher to collect data in this study consisted of a questionnaire and a literature study. According to Sugiyono (2018:142) a questionnaire is a data collection technique that is carried out by giving a set of questions or written statements to respondents to finally be answered.

The distributed questionnaire uses a measurement scale with a Likert scale. According to Sugivono (2018: 93), the Likert scale is used to measure a person's attitude, opinion or perception about an attitude object from a social phenomenon. The indicators of the attitude variable towards an object are the starting point in making questions or statements that must be

sebagian atau seluruh karya tulis ini tanpa mencantumkan dan menyebutkan sumber:

filled out by respondents. Meanwhile, literature study is all efforts made by researchers to collect information relevant to the topic or problem being studied. In this study, the efforts made consisted of searching, reading, and collecting reading materials from books and the internet.

In this study, using a non-probability sampling technique, namely purposive sampling. In this study the purpose of the research was to find out whether making the K-Pop girl group Twice influential or having an effect on increasing the value of the Scarlett Whitening brand, Then consumers who had purchased products from Scarlett after the announcement period of Scarlett made 'Twice' as star ambassador the sample, which is relevant.

Jollowing. $\mathfrak I$ n $\mathfrak h$ is study, data analysis techniques were carried out in various ways, including the

a Dilindungi Undang-Undang **X**alidity Test

 \mathfrak{T} he validity test in this study uses Pearson Product Moment correlation analysis, which is to correlate the score of each item with the total score which is the sum of Each item's score. According to Sugiyono (2018:218) items that have a positive correlation with the total score and high correlation indicate that the item has high Validity. The minimum requirement to be considered eligible is if n = 30 then r = 0.361. So when the correlation between items with a score of less than 0.3 then the items in the instrument are declared invalid.

Reliability Test

Sugiyono (2018: 168) explains that a data is declared reliable if two or more researchers in the same object produce the same data or the same researcher at different times will also produce the same data. The reliability test of this research instrument will use the Cronbach Alpha technique. According to Sugiyono (2018: 220) an instrument is declared reliable if the reliability coefficient is at least 0.6. If the measuring instrument has a Cronbach Alpha value < 0.6 then the measuring instrument is not reliable.

Classic Assumption Test

Normality Test

The data normality test aims to determine whether the data used in the research model has a normal distribution or not. Normality testing can be done using the one sample Kolmogorov-Smirnov test through the SPSS program.

In testing using Kolmogorov-Smirnov, data or variables that can be said to be normally distributed are when the significance value is more than or equal to 0.05. On the other hand, if the significance value is less or less than 0.05, it can be said that it is not normally distributed.

Multicollinearity Test

According to Priyatno (2018:134) the multicollinearity test is a test that aims to test or analyze the regression model whether there is a correlation between independent variables or what is also called independent variables. The absence of correlation in the independent variables is a good regression model. The way to detect the presence or absence of multicollinearity is to use the calculation of the tolerance value and value inflation factor (VIF).

Homoscedastisity Test

Priyatno (2018:136) states that the homoscedasticity test is a test that aims to test the regression model whether there is an inequality of variance from the residuals for the observations in the regression model. The absence of heteroscedasticity or also known as homoscedasticity is a good regression model. The basis for making decisions to test heteroscedasticity in this study uses the Glejser test which if the results of the Sig. (2-tailed) > 0.05, it can be said that homoscedasticity is achieved. However, if the result of the value of Sig. (2-tailed) < 0.05, it can be said that there is a heteroscedasticity problem.

penulisan kritik dan tinjauan suatu masalah

Multiple Linear Regression Analysis

Multiple linear regression analysis is an analysis used to determine the effect of two or more independent variables (independent) on the dependent variable (dependent). This method is used to test or determine the effect of the Brand Ambassador variable which has 2 categories of indicators to be tested, namely the Visibility and Credibility indicators and the Attraction and Power indicators as independent variables on the Brand Value variable as the dependent variable.

Hak cipta

Multiple linear regression analysis two or more independent varial (dependent). This method is use Ambassador variable which has 2 Visibility and Credibility indicator independent variables on the Brand Hypothesis Test (T – Test)

According to Priyatno (2018:121 independent variable partially or it has a significant effect or not. To comparison between the significance of that the independent variable has if the significance value > 0.05 the variable has no effect on the dependent variable with cannot be used to predict the dependent variable with the variable has a strong or close to zero, then the independent variable has a strong or close to zero, then the independent variable has a strong or close to zero, then the independent variable has a strong or close to zero, then the independent variable has a strong or close to zero, then the independent variable has a strong or close to zero, then the independent variable has a strong or variable on the Brand Value variable. However independent variable with the Visibility and Credi which means that the variable with the Value variable. However, the regression has that it shows a positive influence that it show According to Priyatno (2018:121) T-test is useful for knowing the effect of the independent variable partially or individually on the dependent variable whether it has a significant effect or not. The basis for decision making is by looking at the comparison between the significance value and the alpha value (α) = 0.05 with the provision that if the significance value is <0.05 then H0 is rejected, which means that the independent variable has an effect on the dependent variable. Meanwhile, if the significance value > 0.05 then H0 is accepted, which means the independent variable has no effect on the dependent variable.

The F test is useful for testing whether the regression model is feasible or not to be used in predicting the dependent variable. The test criteria are the same as the T test which also uses a significance value of 0.05. The condition is that if the value of Sig F < 0.05 then H0 is rejected, which means that the regression model can be used to predict the dependent variable and is feasible to use. Meanwhile, if the value of Sig F > 0.05 then H0 is accepted, which means that the regression model cannot be used to predict the dependent variable and is feasible to use.

Coefficient of Determination Test (R2)

Sugiyono (2017) states that the Coefficient of Determination Test is used with the aim of measuring how far or how big the ability of the independent variable in explaining the dependent variable. The stipulation is that if the value of R2 is equal to or close to zero, then the independent variable has a small or limited effect on the dependent variable. However, if the value of R2 is close to one, then the independent variable has a strong effect on the dependent variable.

The following is a summary of the discussion regarding the results of the influence of each

- 1. From the partial test or T test that has been carried out, the results show that the variable with the Visibility and Credibility indicators has a Sig value. of 0.101 > 0.05which means that the variable with the indicator has no significant effect on the Brand Walue variable. However, the regression coefficient has a positive value of 0.124 which means that it shows a positive influence given. With this, it shows that Ha with the statement "Visibility (popularity) and Credibility (credibility) indicators have a positive effect on increasing the Scarlett Whitening Brand Value" is still accepted.
- 2. Based on the data analysis that has been done, it is known that there is a significant relationship between the Attraction and Power indicator variables and the Brand 🔂 alue variable in this study. This is supported by the results of the partial test or T test \blacksquare where the variable with the indicator has a Sig value. of 0.000 < 0.05, which means that The Attraction and Power variables here have a significant effect on the Brand Value variable. Then, for the positive regression coefficient, which is 0.548, it can also be said that there is a positive influence given to this indicator. With this, it shows that Ha with

デ

dan tinjauan suatu masa

the statement "Attraction and Power indicators have a positive effect on increasing the Scarlett Whitening Brand Value" is accepted.

CONCLUSIONS

This study was conducted with the aim of knowing whether there is an influence or effect from the K-Pop girl group Twice on the brand value of Scarlett Whitening, where in the role of the brand ambassador there are several supporting indicators, namely visibility, credibility, fattraction and power. Based on the research and testing that has been done, the authors can draw several conclusions:

drawseveral conclusions:

The Brand Ambassador variable with Visibility and Credibility indicators has a positive but not significant effect on Brand Value. This means that the popularity of a brand ambassador has less of an influence on consumer interest and its credibility is less convincing.

Brand Ambassador variable with indicators of Attraction and Power has a significant positive effect on Brand Value. This means that the attractiveness and strength of Twice is more capable of persuading consumers.

ambassador has less of an influence on consumer interest and its credibility convincing.

Brand Ambassador variable with indicators of Attraction and Power has a sign positive effect on Brand Value. This means that the attractiveness and strength is more capable of persuading consumers.

Brand Ambassador variable with indicators of Attraction and Power has a sign positive effect on Brand Value. This means that the attractiveness and strength is more capable of persuading consumers.

Brand Ambassador variable with indicators of Attraction and Power has a sign positive effect on Brand Value. This means that the attractiveness and strength is more capable of persuading consumers.

Brand Ambassador variable with indicators of Attraction and Power has a sign positive effect on Brand Value. This means that the attractiveness and strength is more capable of persuading consumers.

Brand Ambassador variable with indicators of Attraction and Power has a sign positive effect on Brand Value. This means that the attractiveness and strength is more capable of persuading consumers.

Brand Ambassador variable with indicators of Attraction and Power has a sign positive effect on Brand Value. This means that the attractiveness and strength is more capable of persuading consumers.
